INFORMATION YOU SHOULD KNOW

- There are **NO RISKS** to the mother or baby in the manner 3D/4D ultrasound images are obtained. The imaging is performed in a safe manner using latest technology and adhering to the safety protocols (re: usage of Diagnostic Ultrasound) developed from latest published literature. These scanning protocols are revised and updated every 3 months.
- 4D imaging will show in real time movements of the baby.
- 3D/4D ultrasound will allow you to watch your baby's features.
- What you see in 3D/4D images during your visits will depend upon the position of the baby.
- Facial features of the baby are best viewed near 25-29 weeks.
- Family and friends are welcome during the scanning sessions (patient consent is required)
